

Traceability and Transparency

Diagnosing Distributed Systems in 2022

Purchase

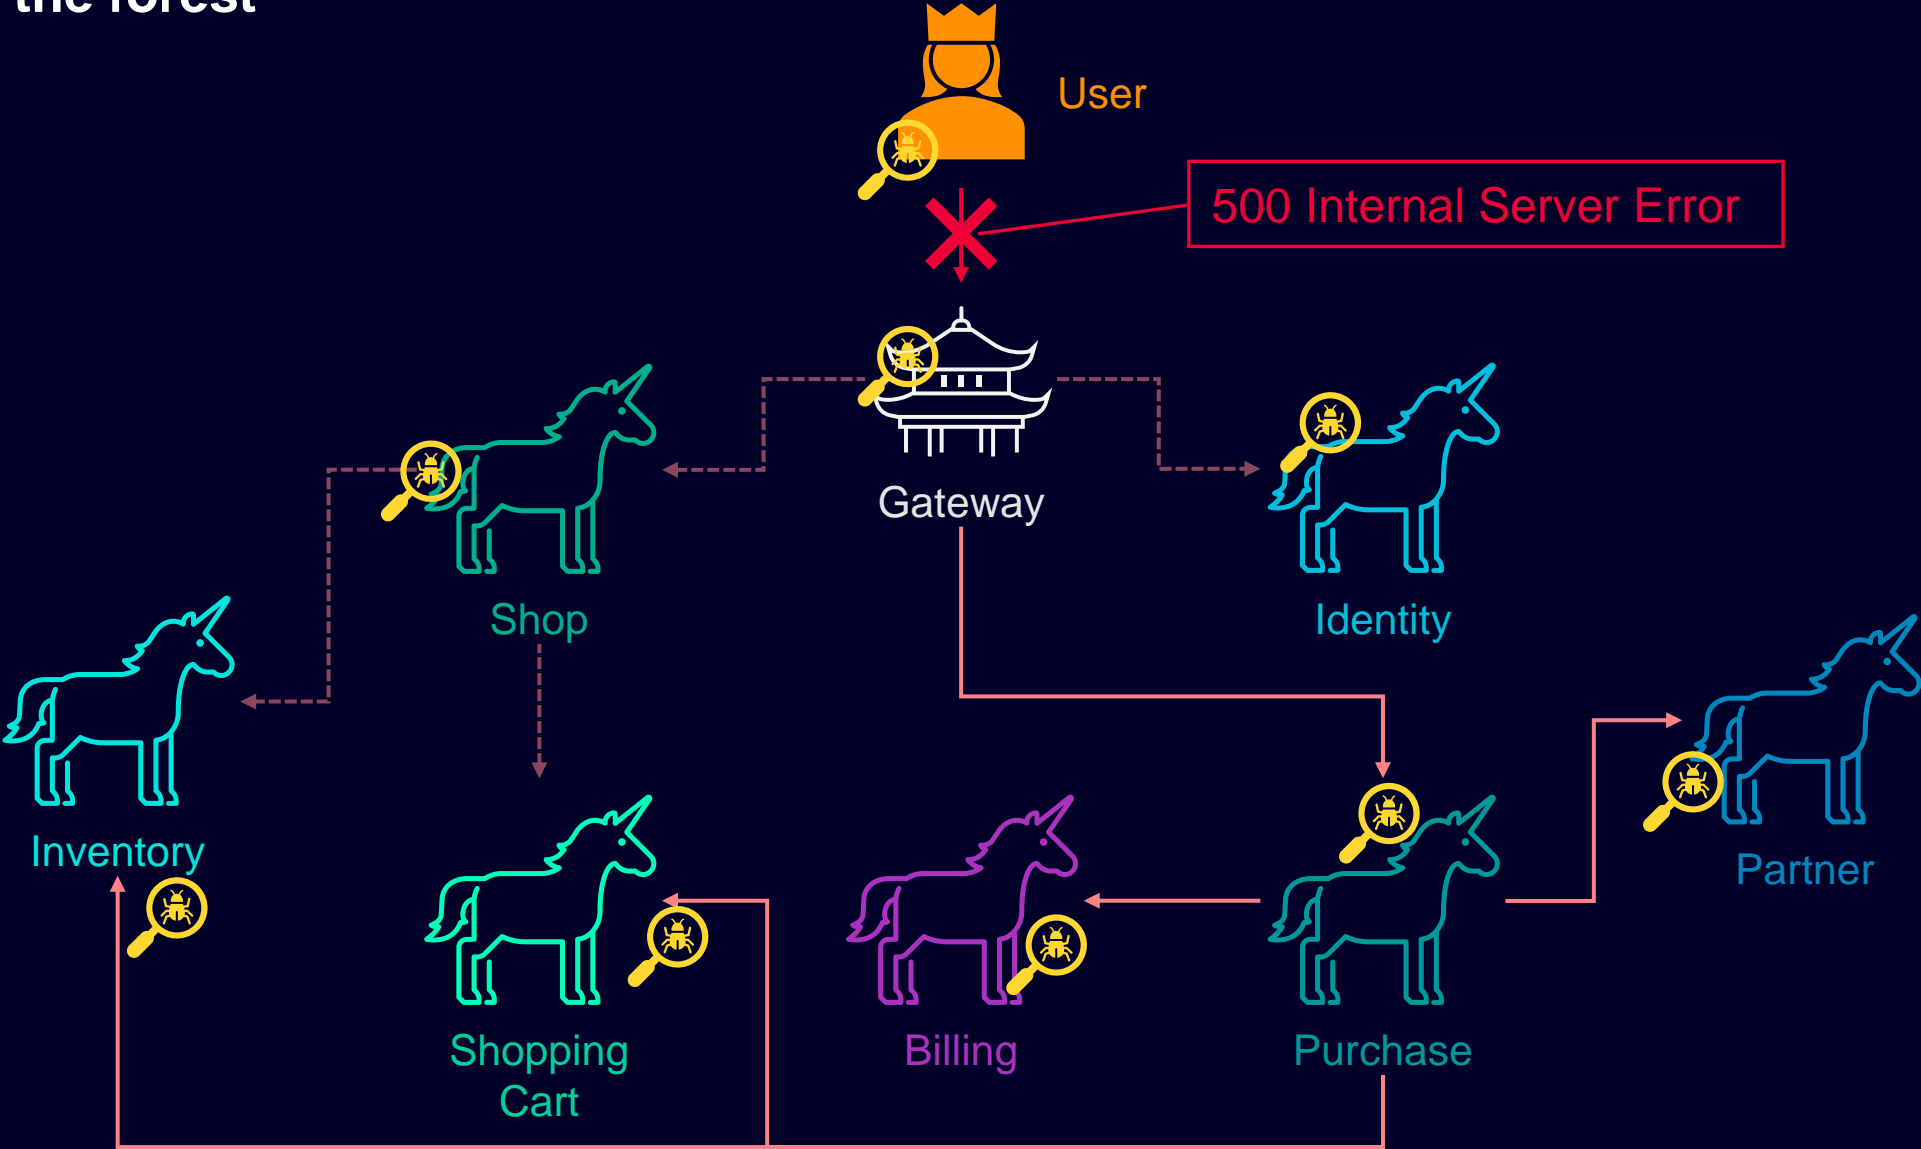

Chatter in the elusive service forest

One error to rule them all

Combing the forest

| Don't panic!

Some simple solutions to improve your life or what we currently do in MindSphere AWS

Operational basics

Frontend

Backend

Storage

- Can be containerized
- Deployment and updating is rather simple
- Most probably stateless
- We like this, this is nice

Easy to self operate

- Redundancy is complicated
- Lifecycle operations are difficult
- Basically, the **devil**

Cloud native preferred

Log storage

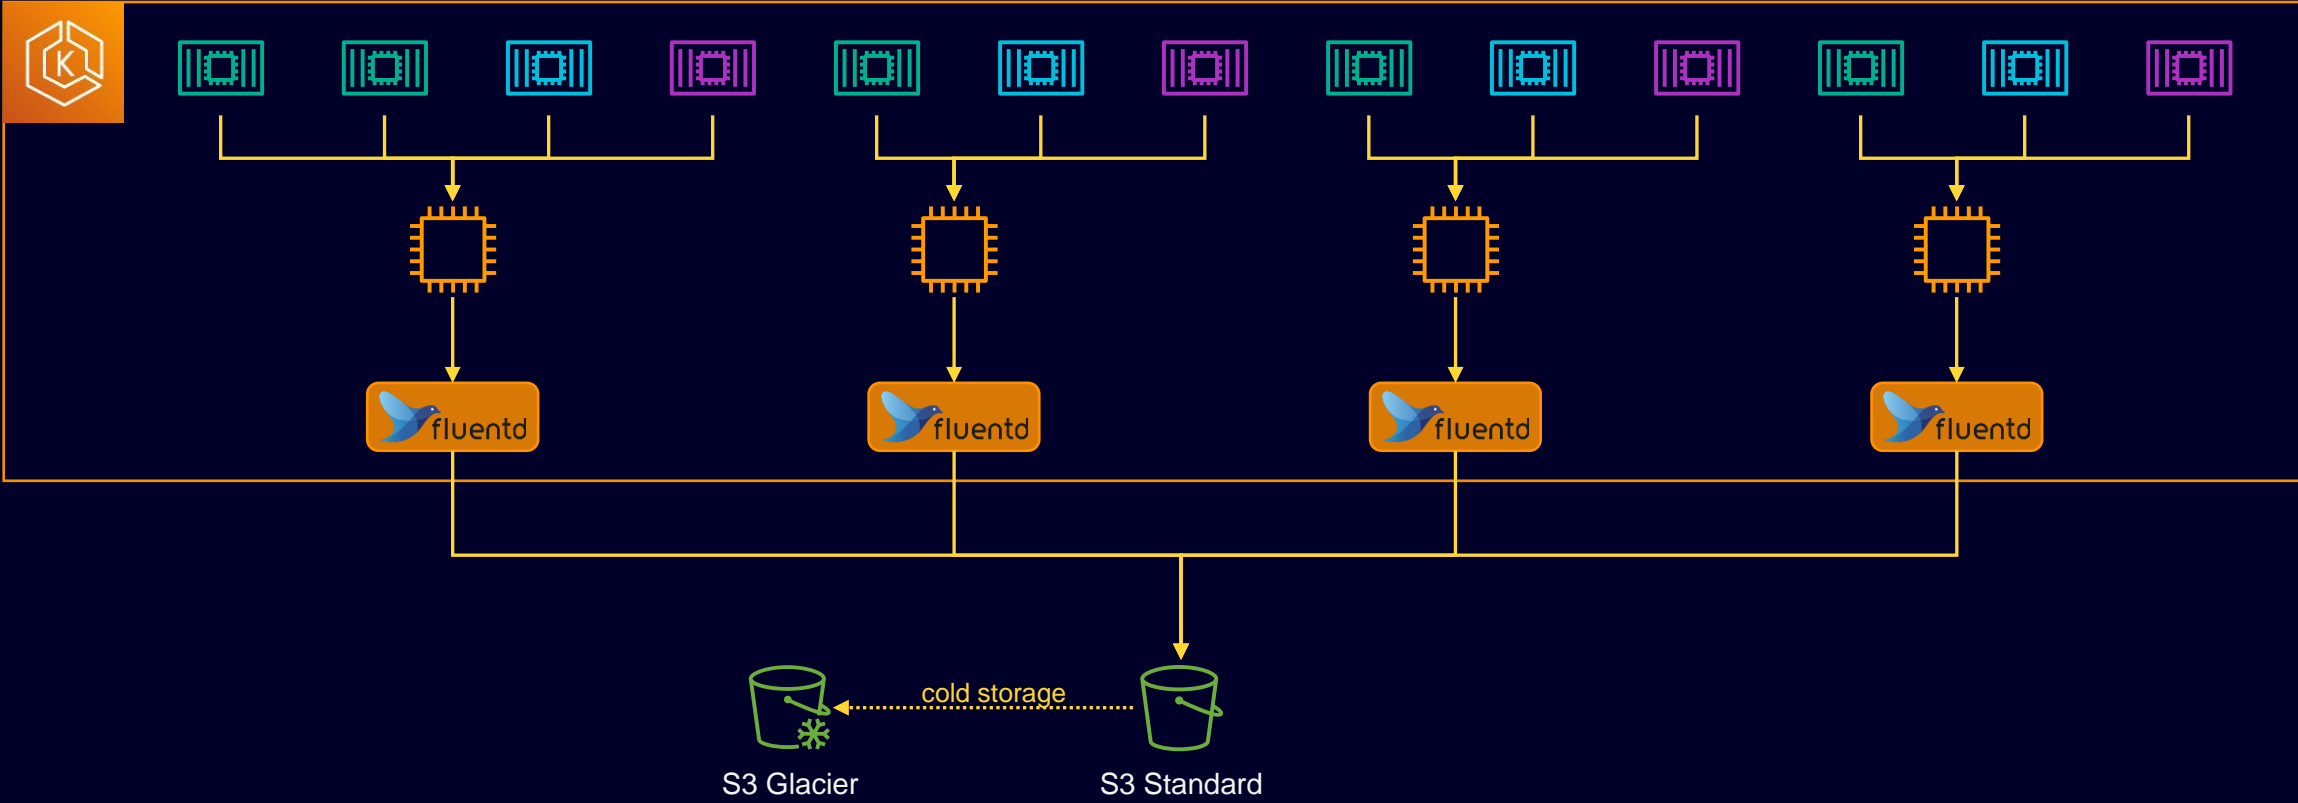

Shop

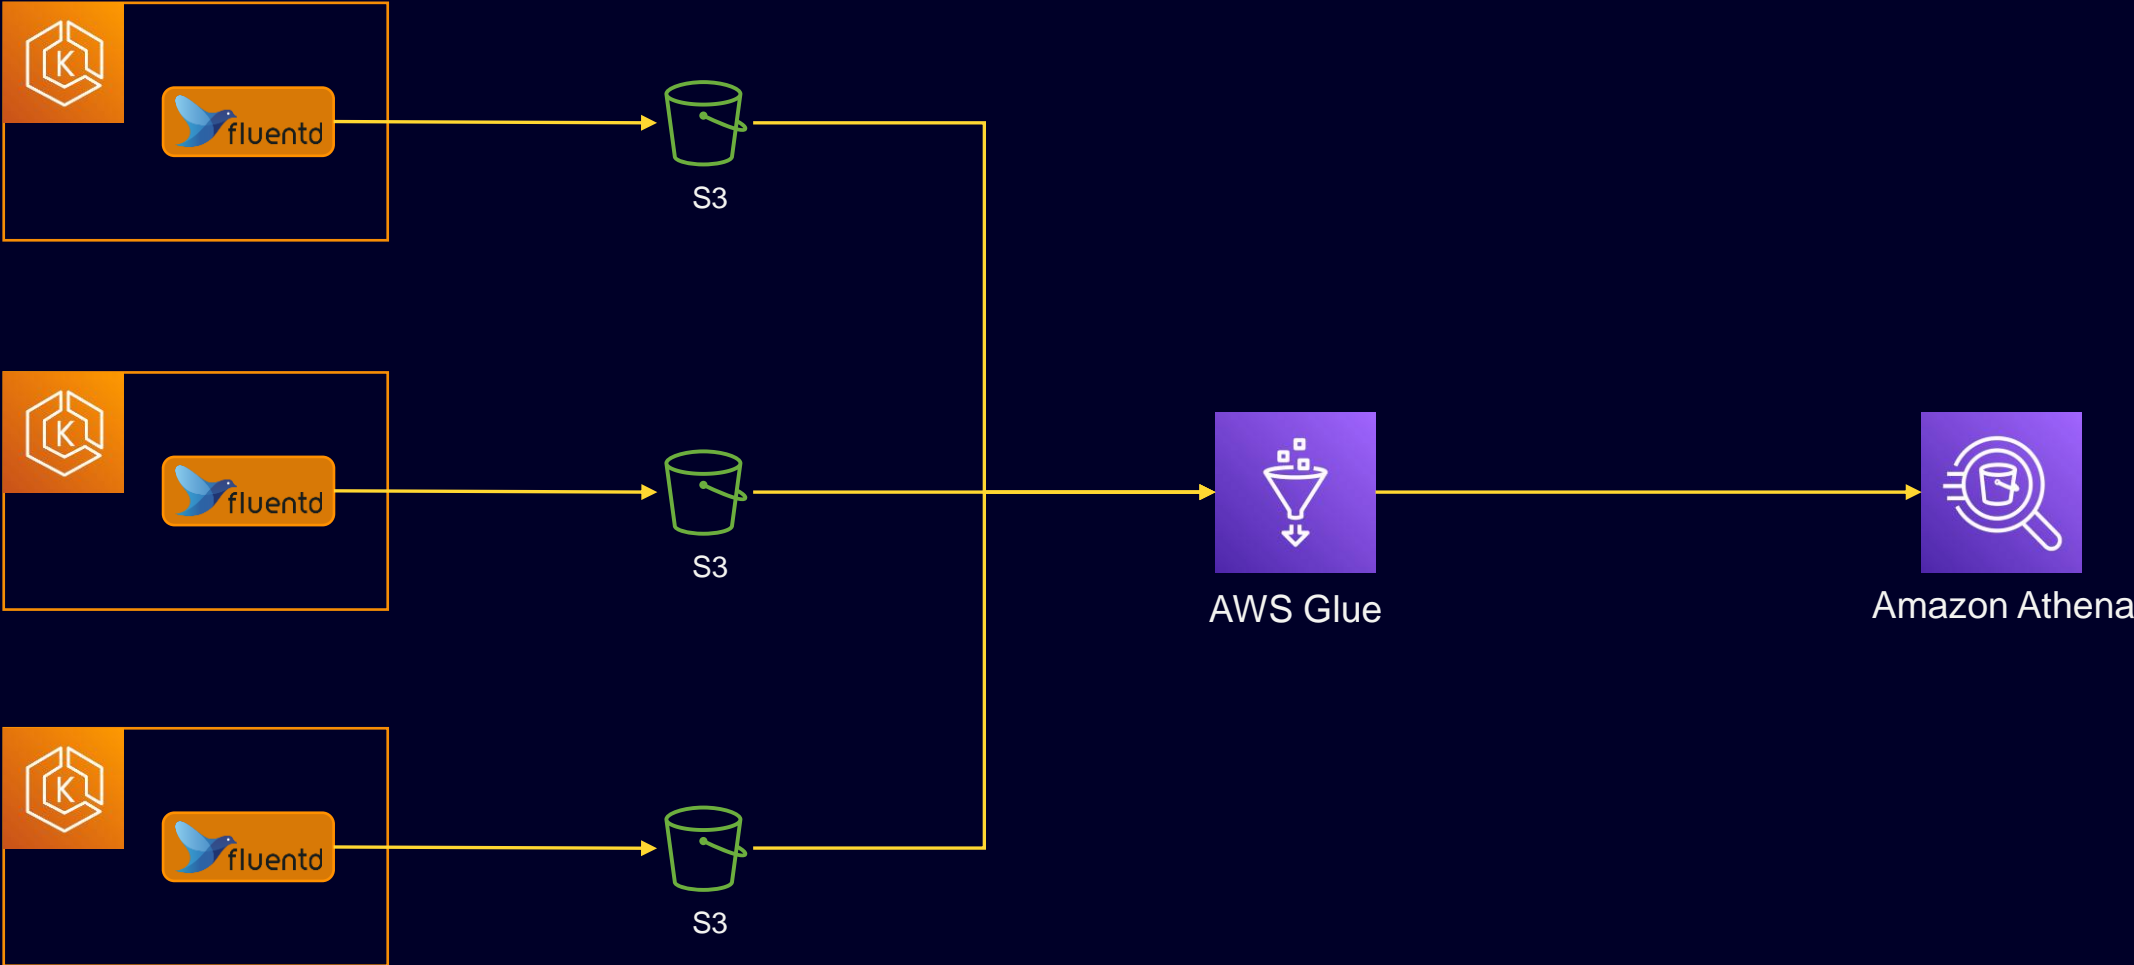

Identity

Billing

Log queries

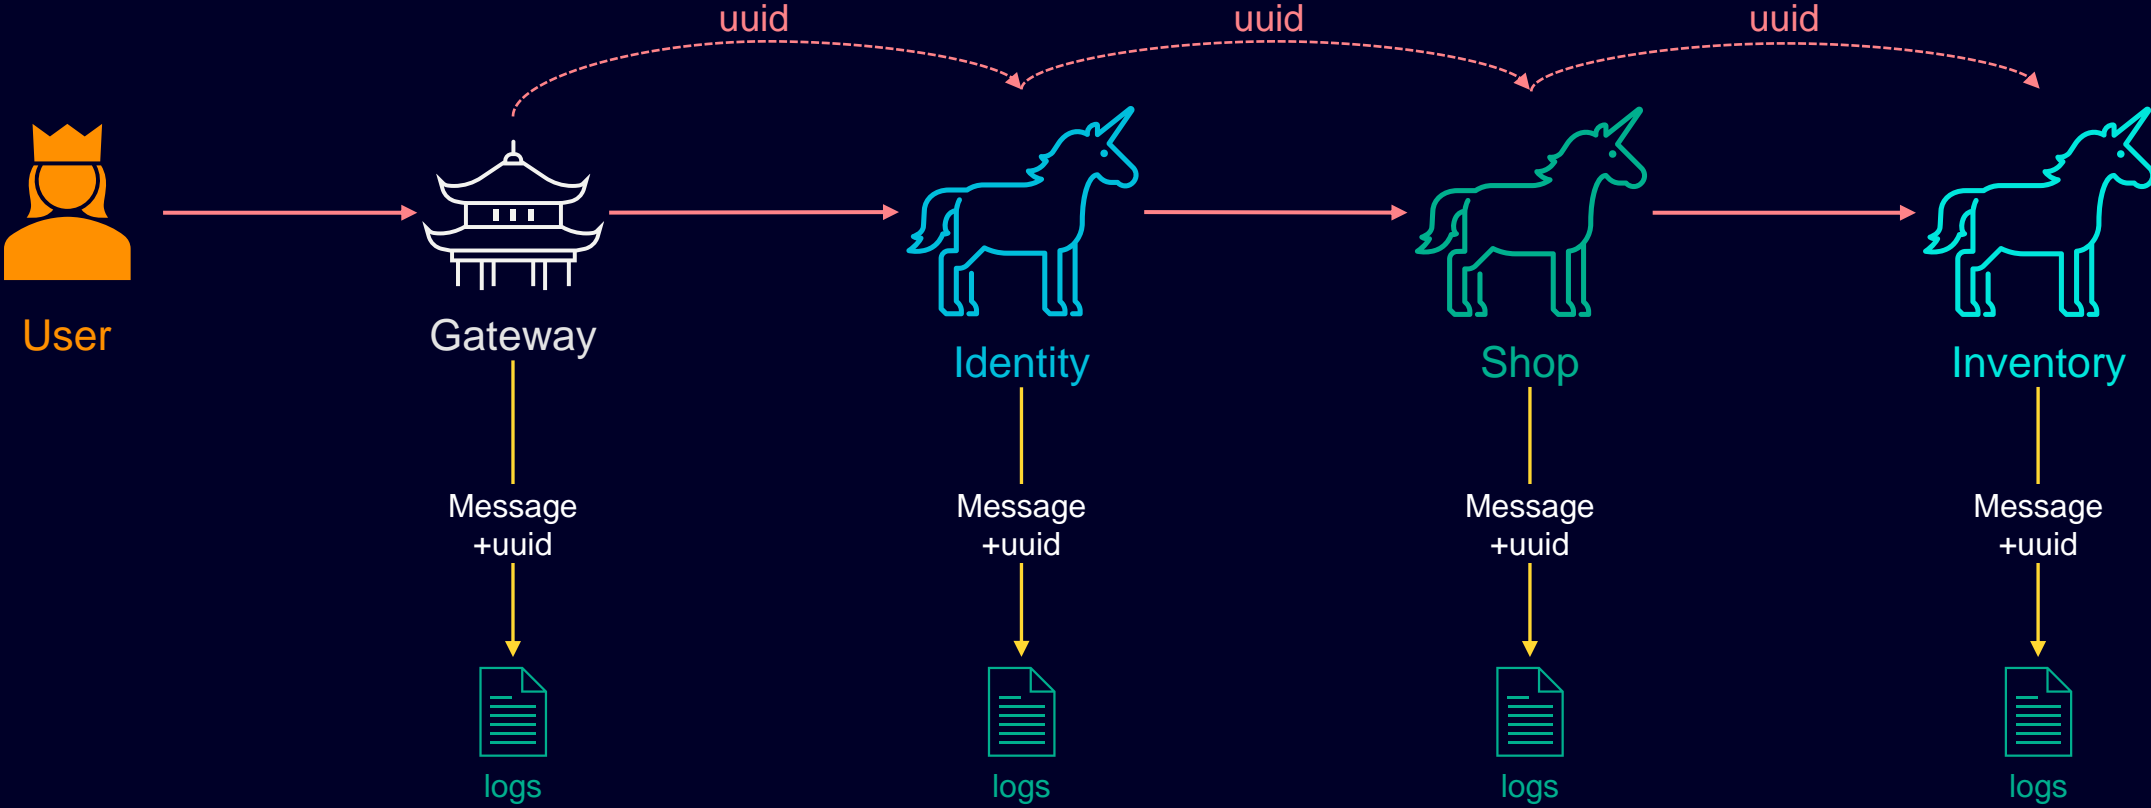

Easy to manage, eats data like no other

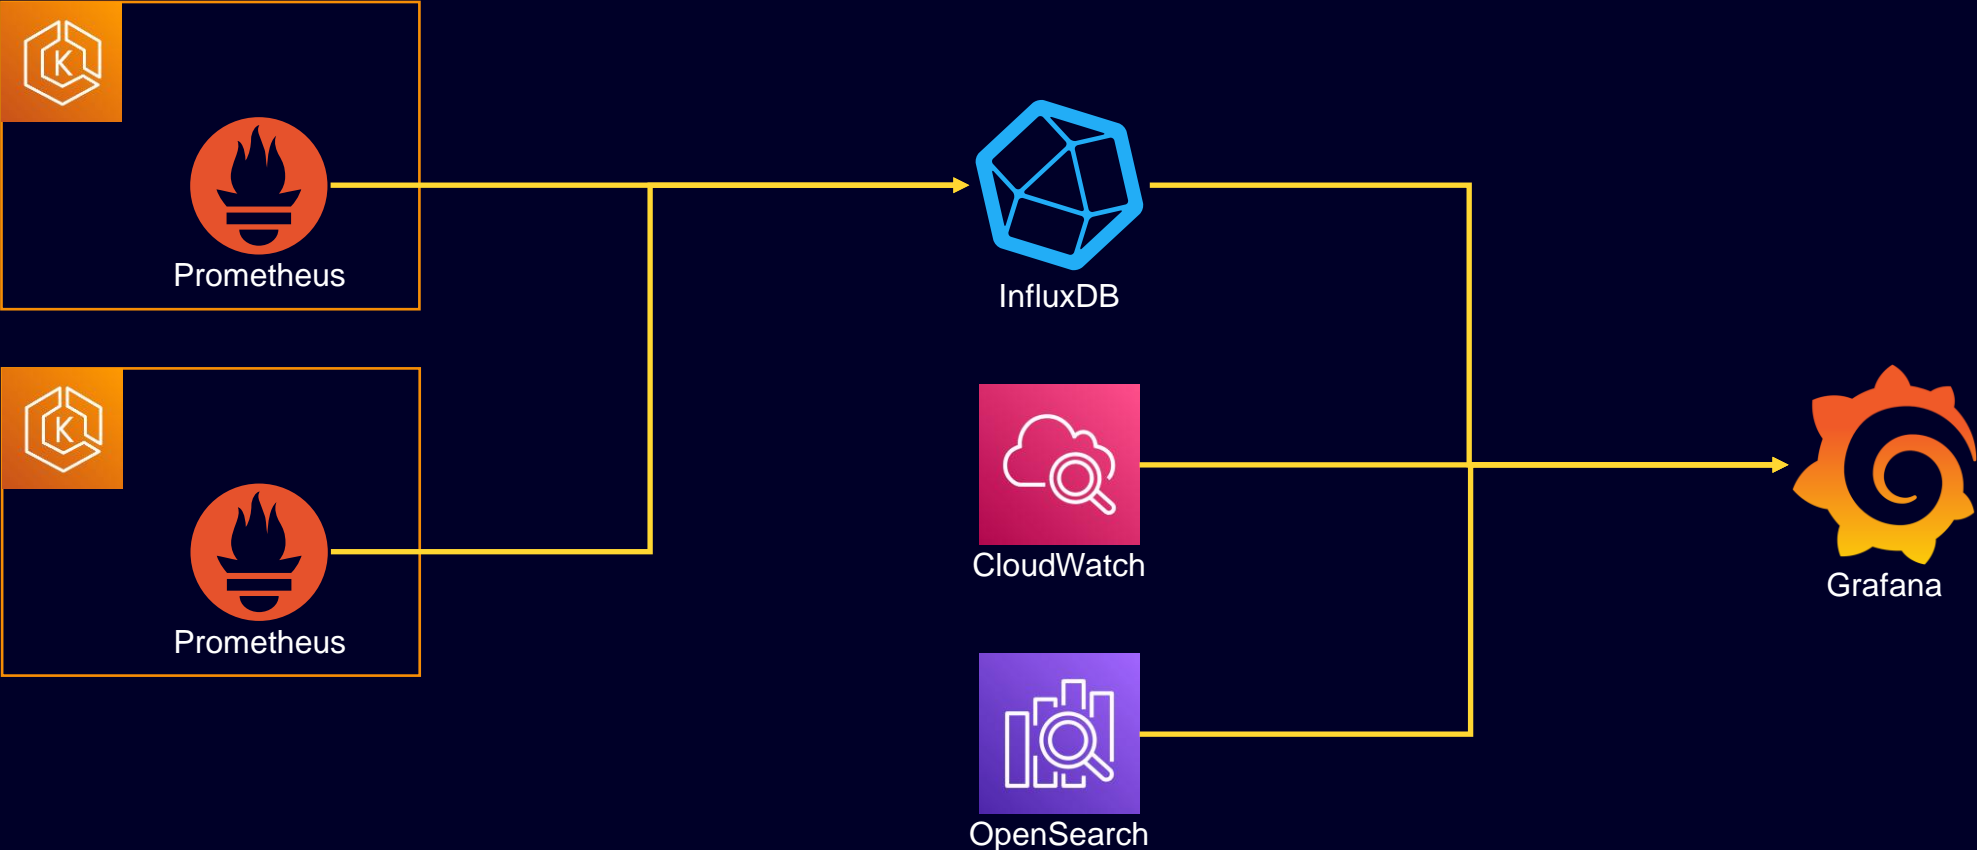

Azure solution (demonstrate multi cloud)

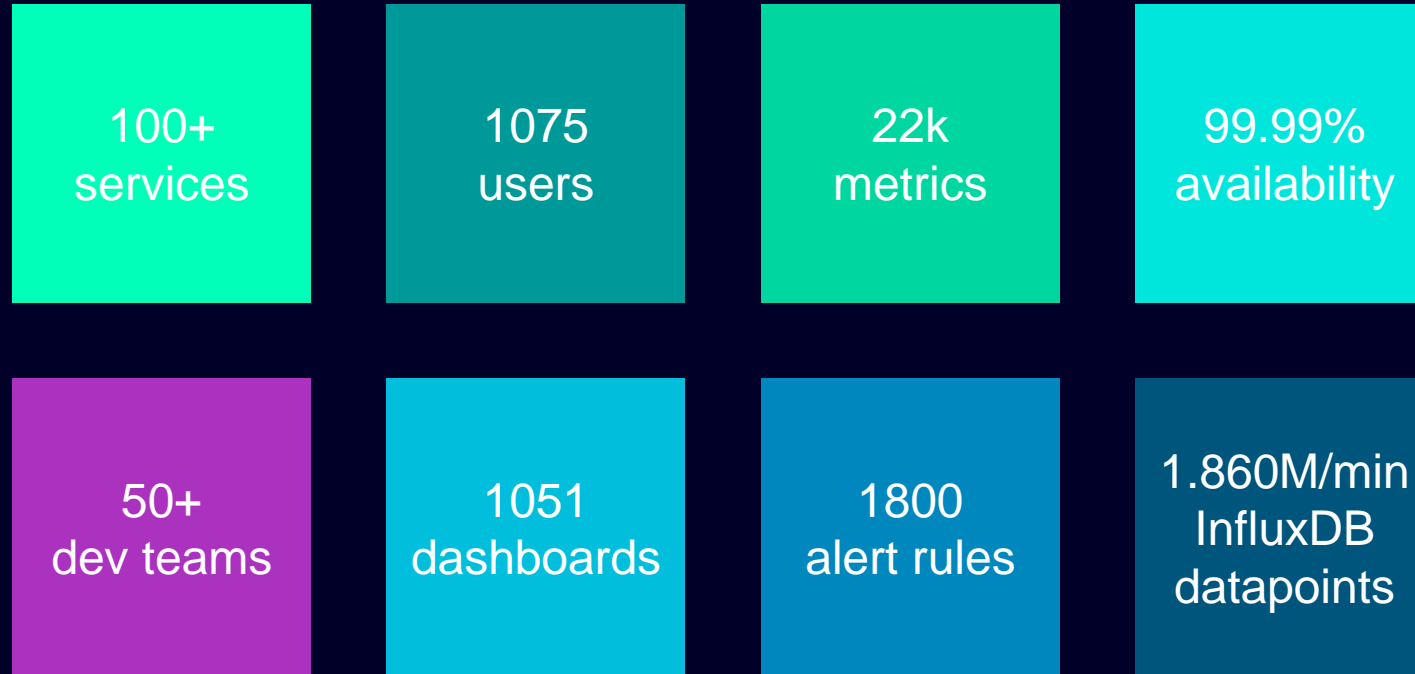

Correlation ids

Monitoring

Building to scale

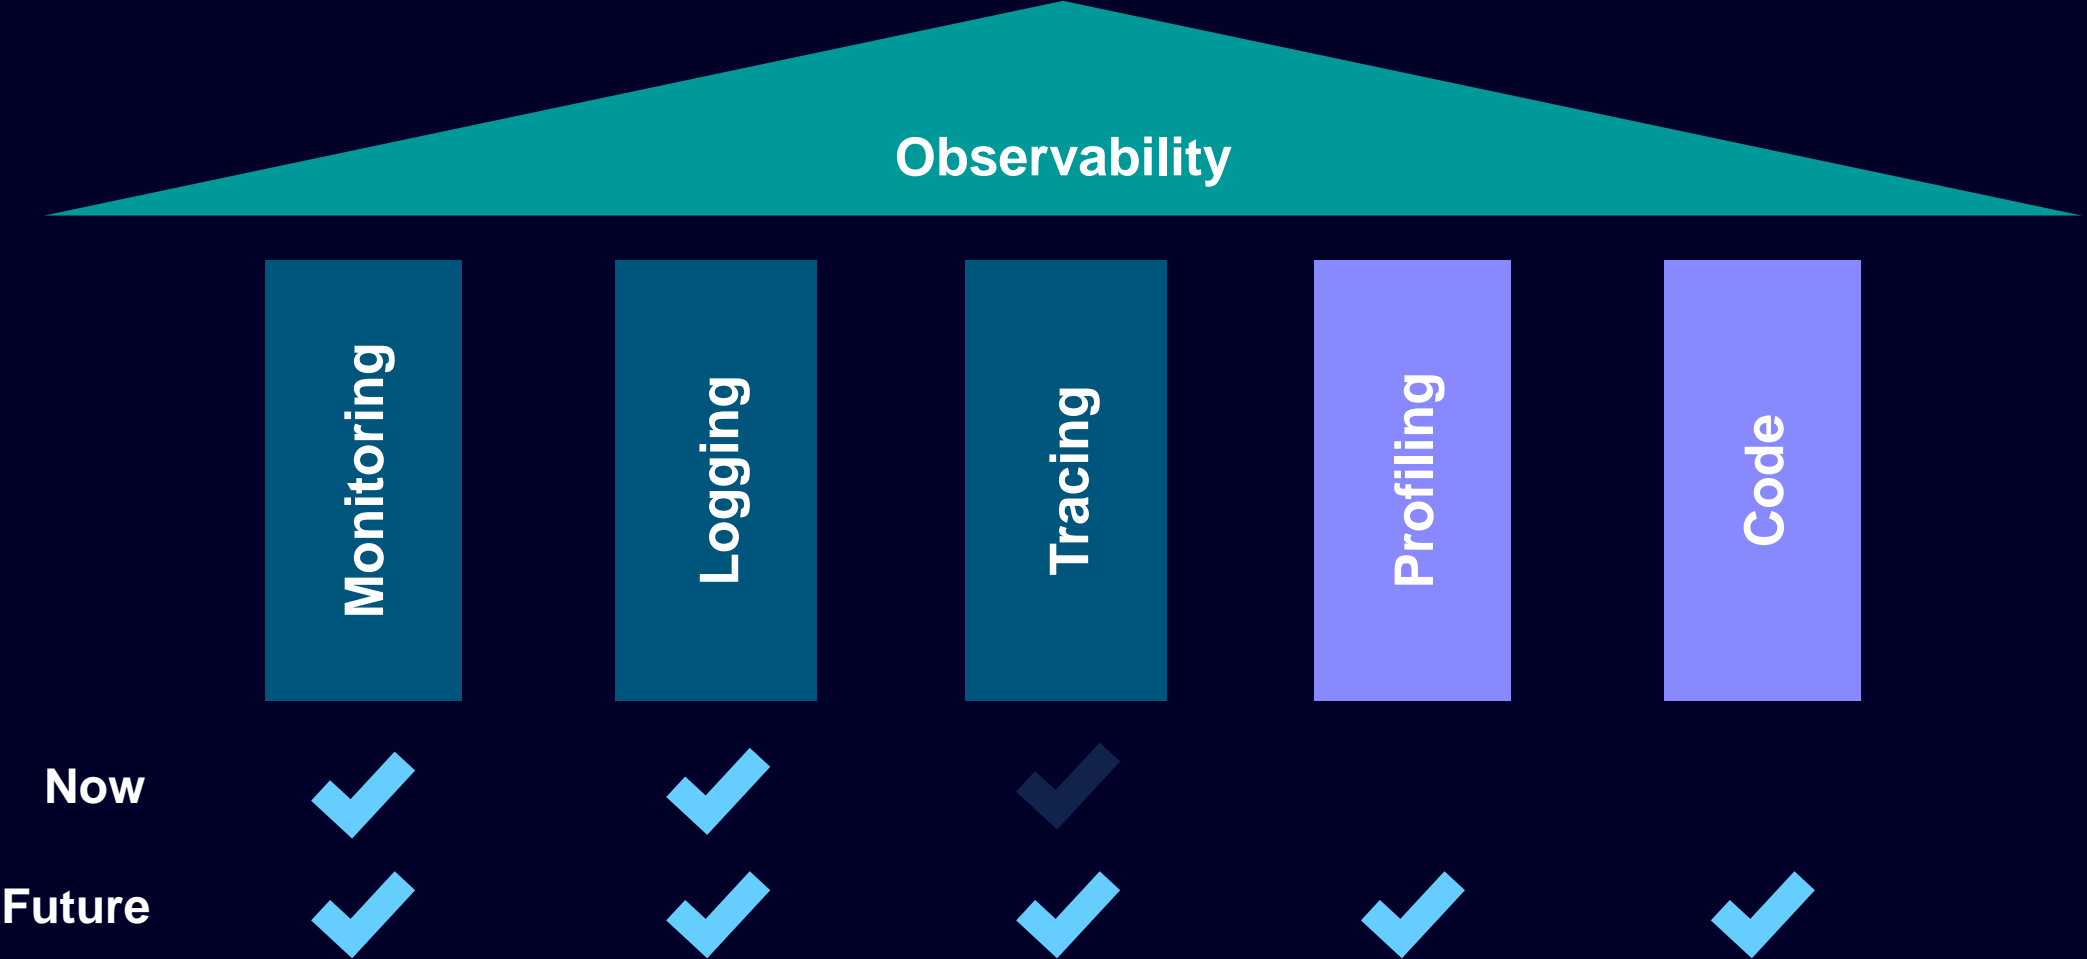

What we have and what we are still looking for

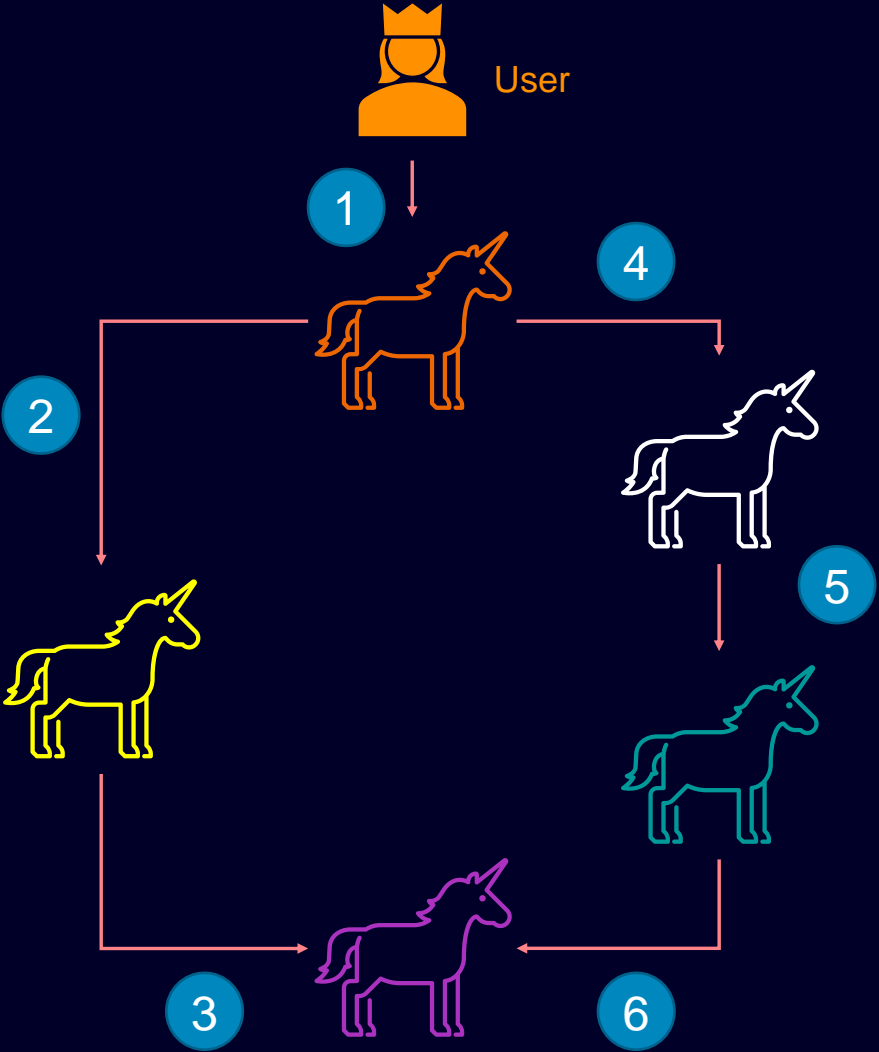

OSS solutions

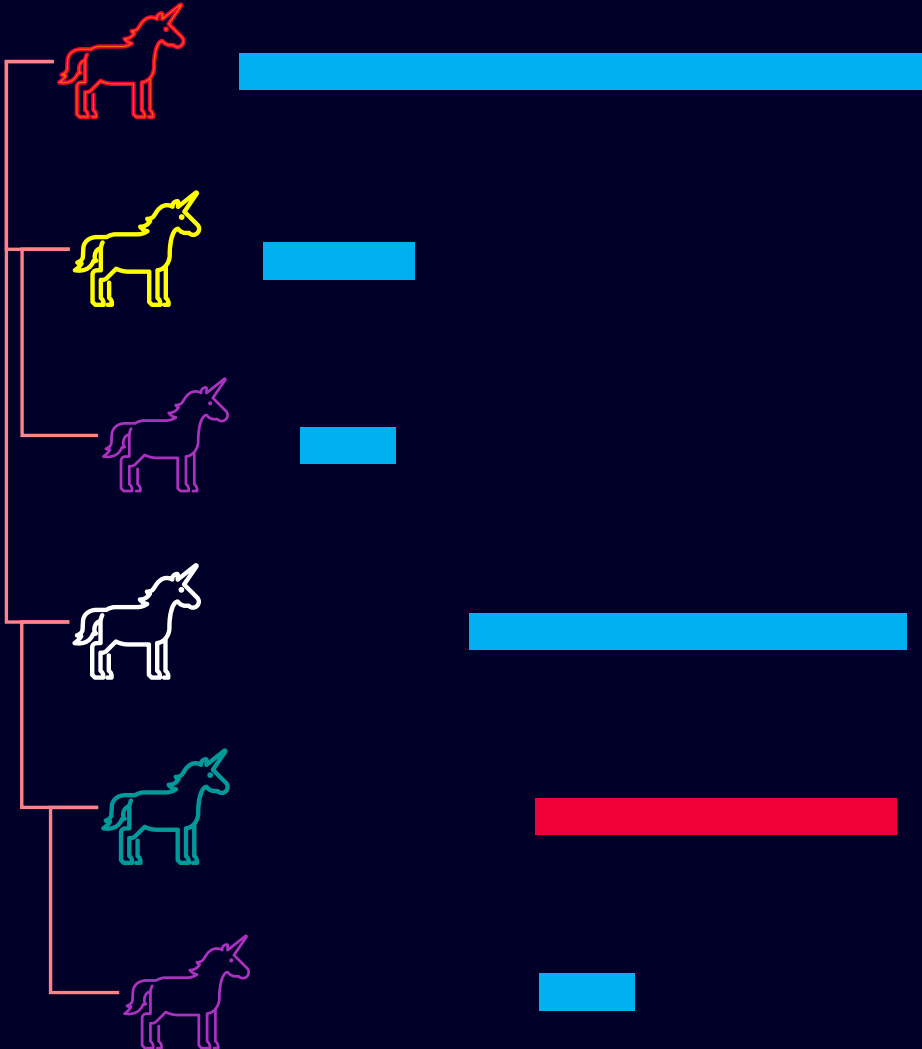

Diagnosis and observability go hand-in-hand

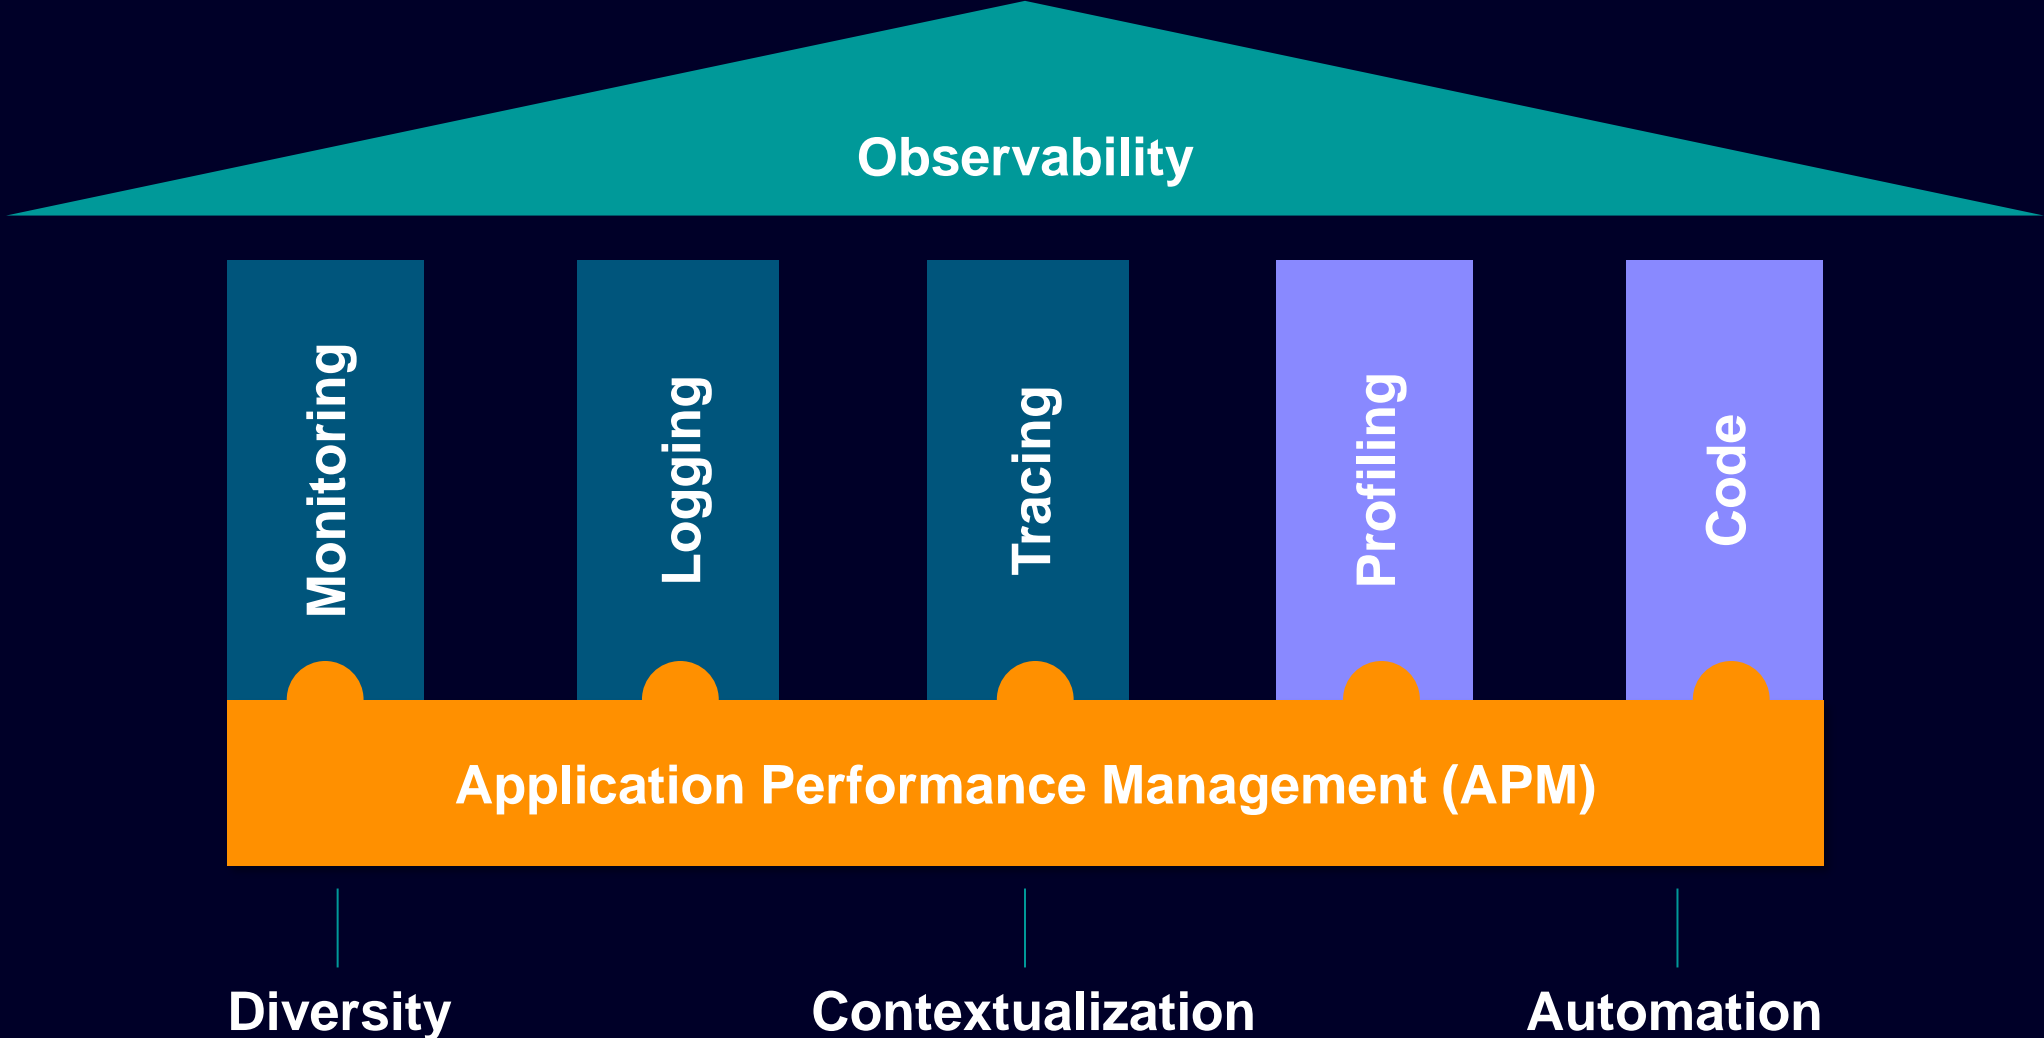

(Distributed) Tracing, more than correlation

1 Trace
6 Spans

One tool to rule them all: no more context switch

OSS building blocks for observability

Data Collection + Application Performance Management (APM)

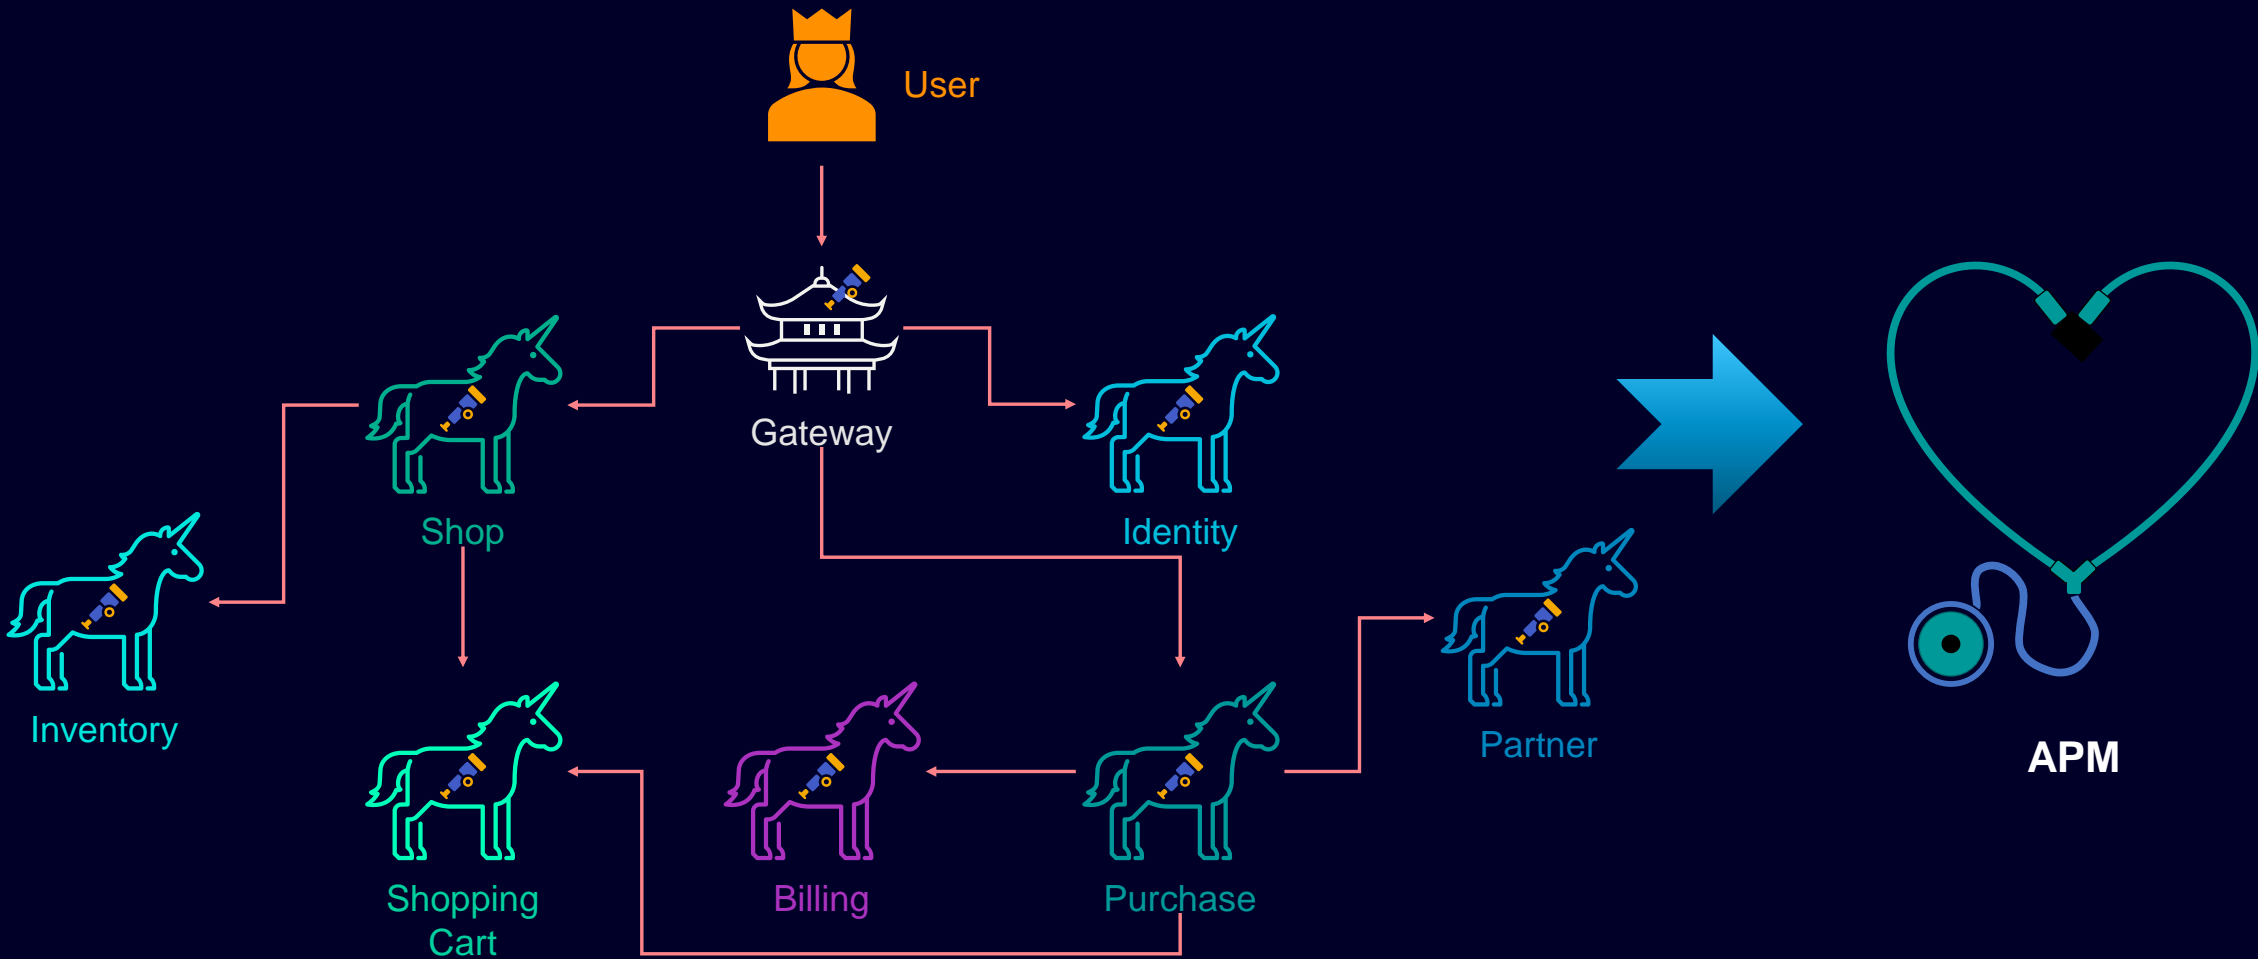

OSS : OpenTelemetry

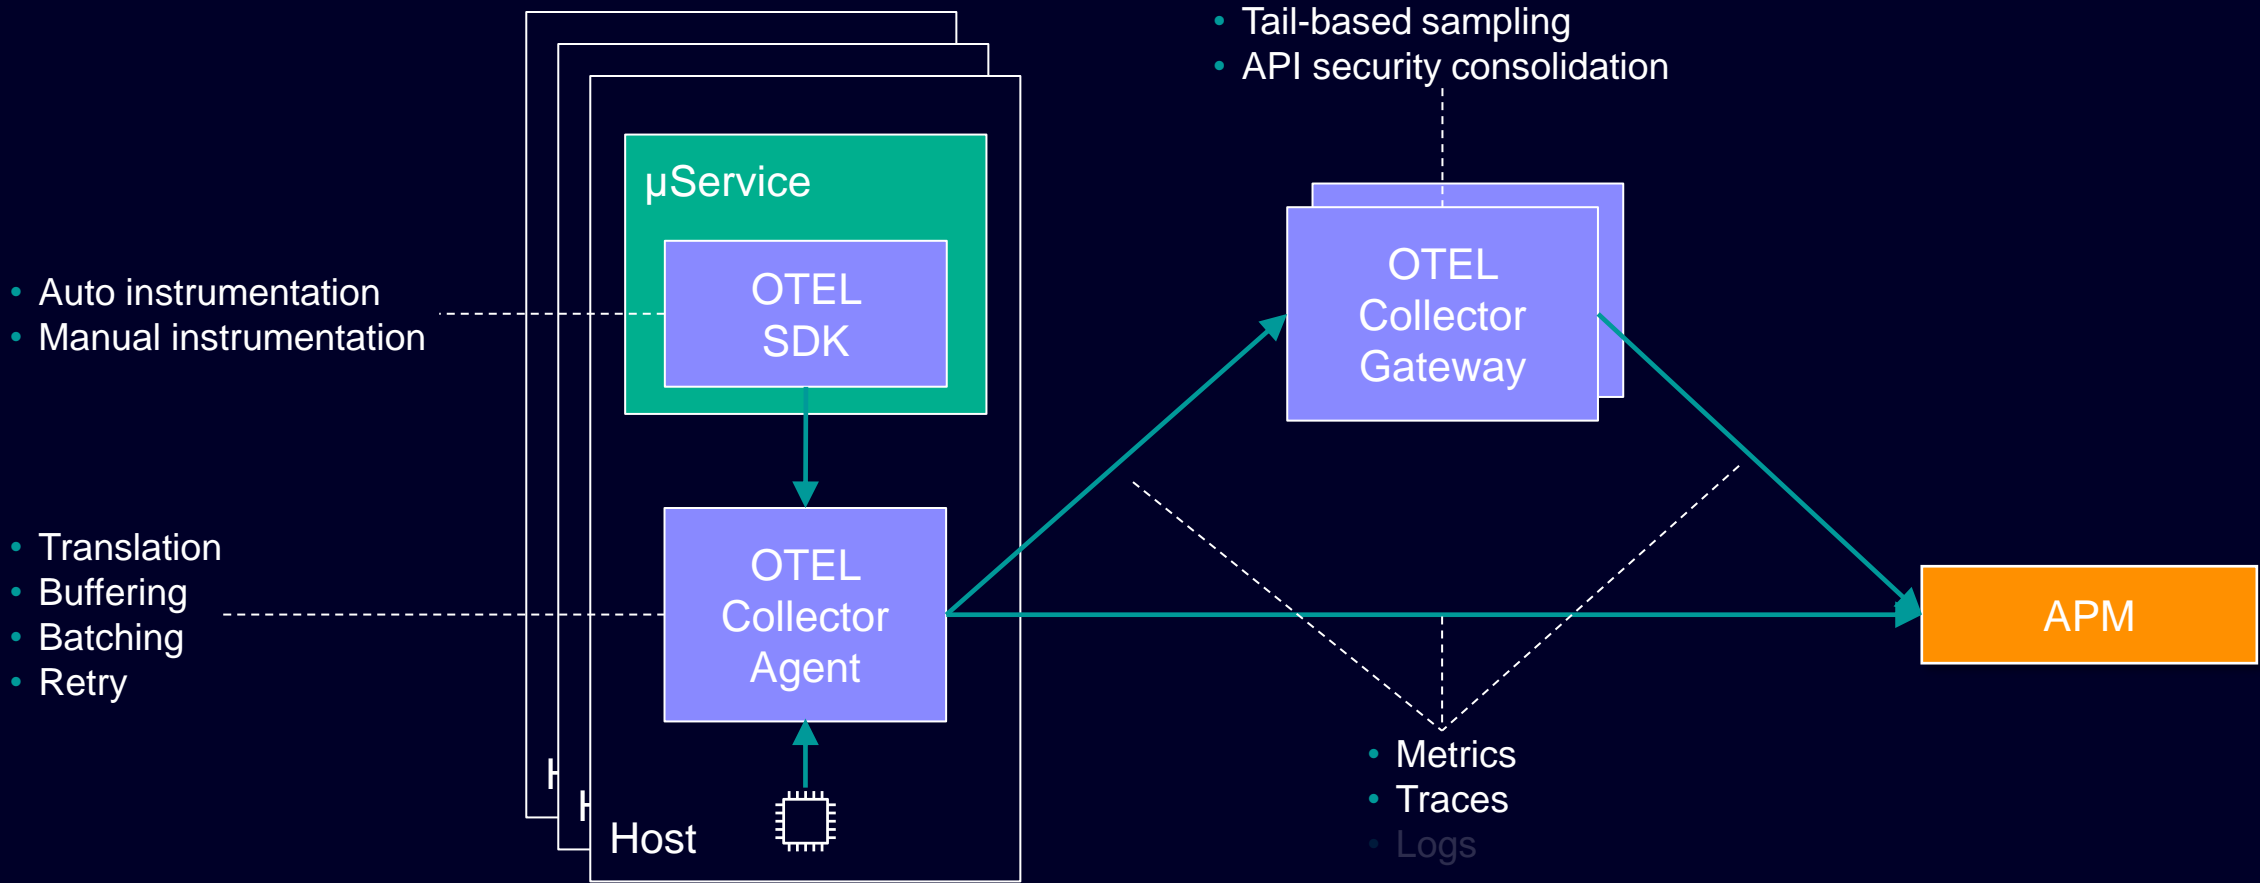

Elastic APM, Grafana Tempo, ...

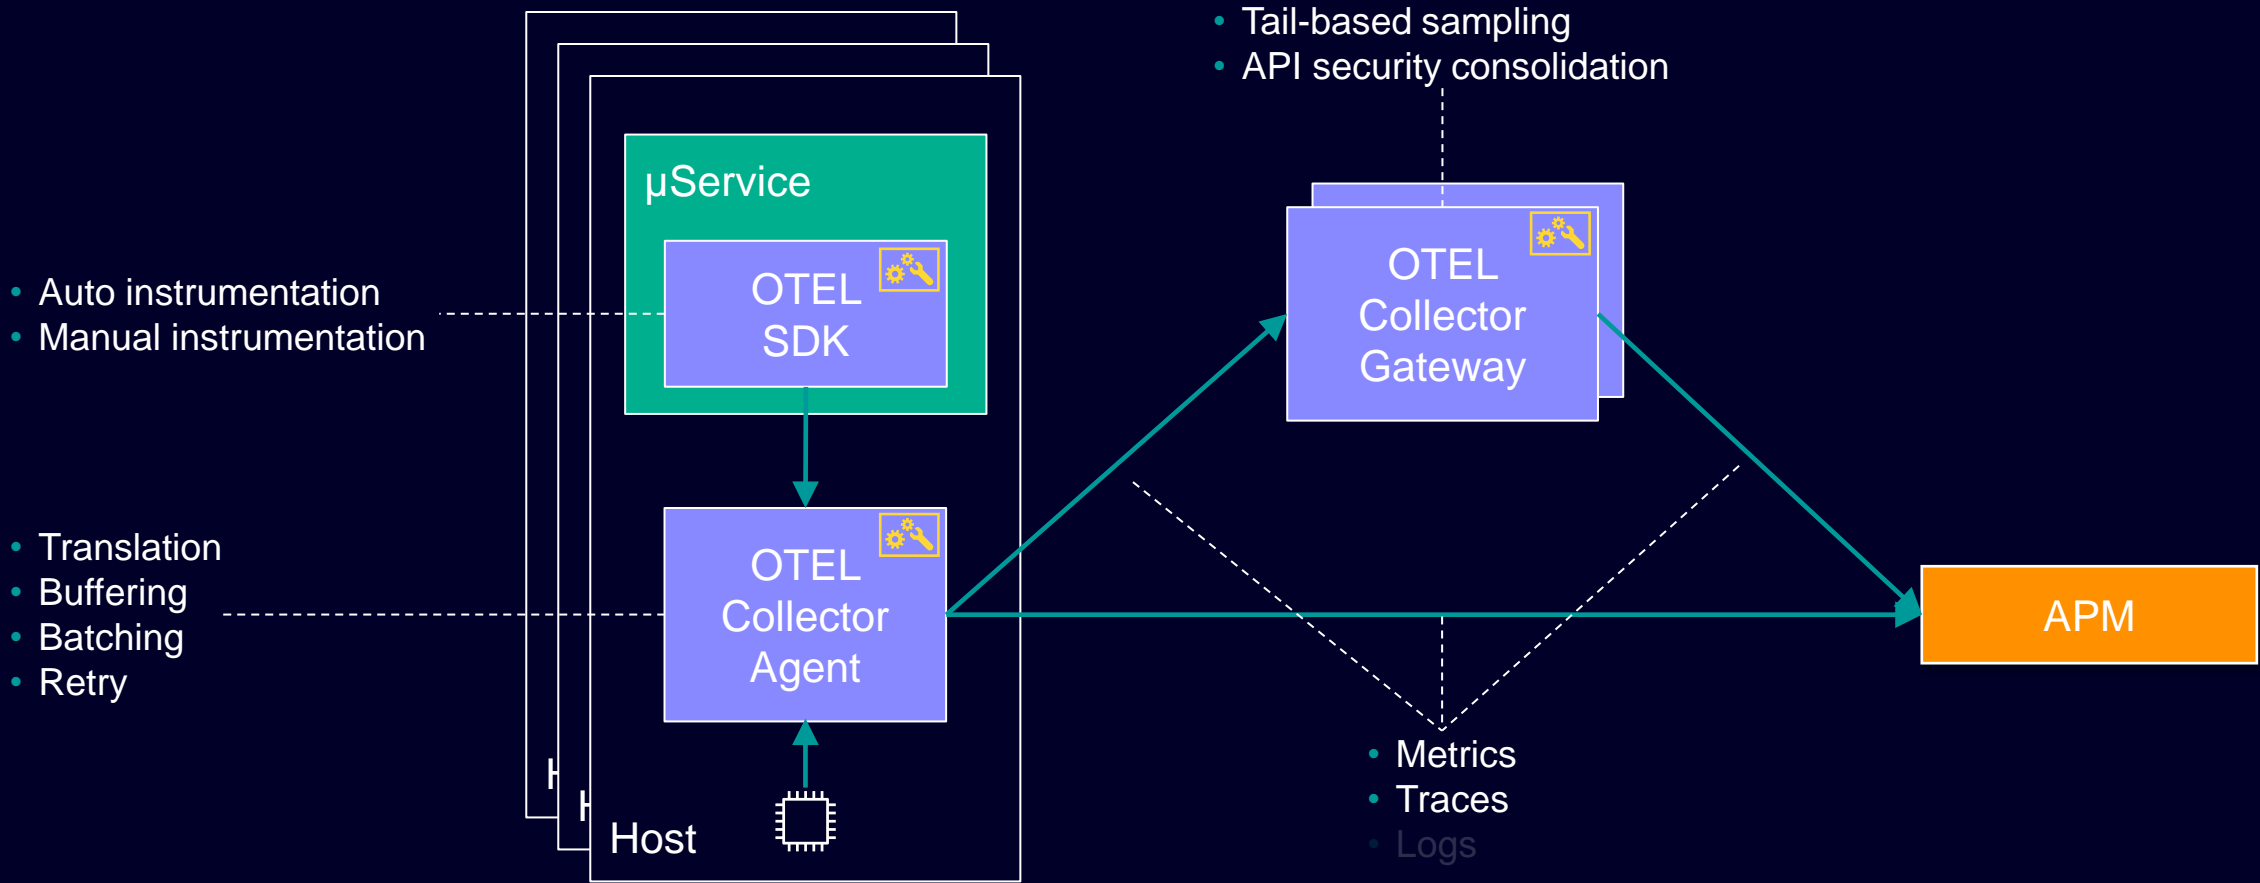

Vision

OpenTelemetry reference architecture

Lots of extension points exist
