

# Open Innovation and Open Source in Schleswig-Holstein

Dirk Schrödter

Minister of Digitalization and Head of the State Chancellery

# Importance of Digital Sovereignty

**The IT of public administration has become a critical part of operations, and its functionality is systemically relevant.**

# Digital Sovereignty

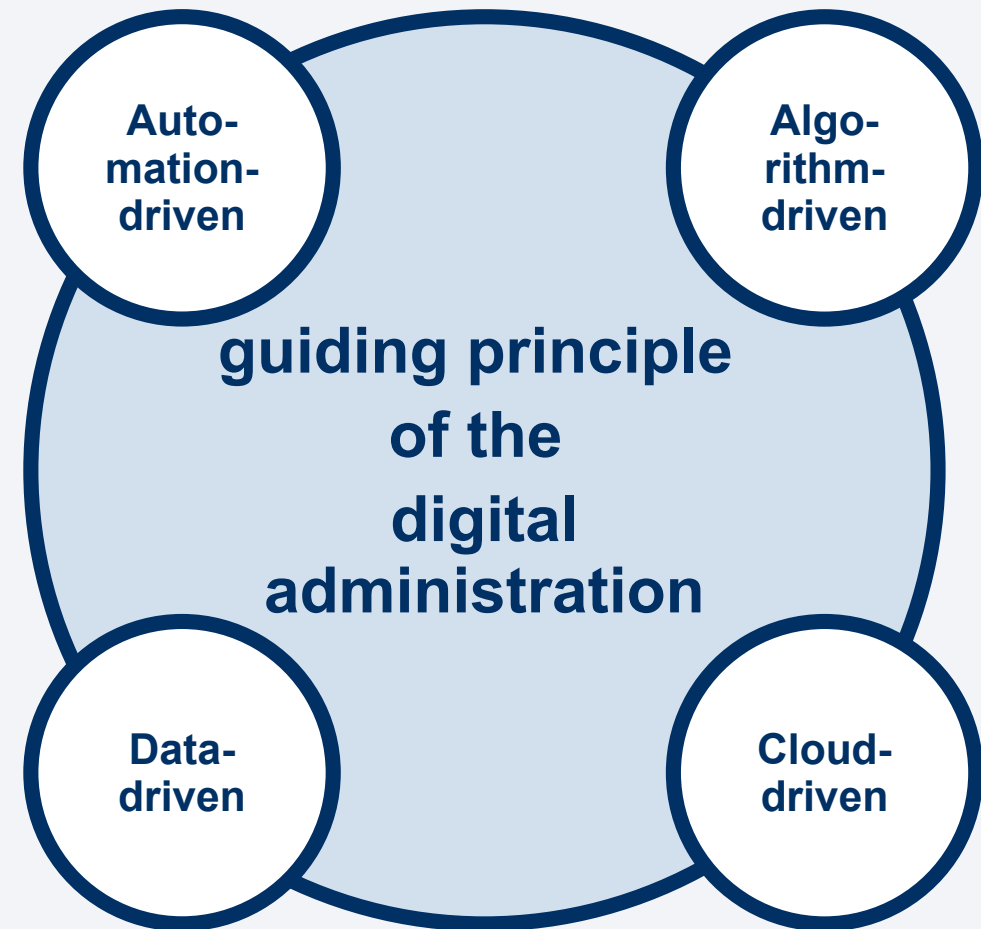

Digital sovereignty means that **individuals** and **institutions** have the **capabilities and skills** to fulfil their **roles** in the digital world **independently, autonomously and securely.**

# Risks of Proprietary Software

1. Limited power to shape our IT Systems
2. Limited transparency
3. Security risks
4. Monopolistic pricing

# Future of Administration

**moving to cloud – increase dependencies due to vendor cloud systems**

# Targets with Digital Sovereignty

- 1. Be able to influence the operational processes of our IT systems**
- 2. Be in control of government data (citizen and company data)**
- 3. Be able to influence the design of solutions**
- 4. Minimize security risks**
- 5. Reduce economic/ cost risks**

# Ensuring Digital Sovereignty

**Ensure digital sovereignty and save autonomy by:**

- 1. Diverse Provider Landscape**
- 2. Adopting Open Standards**
- 3. Implementing and Using Open Source Software**

# IT-Security

- **IT security for government, critical infrastructure, and security-relevant applications is at risk without full access to source code**
- **Using of Open Source**
  - ✓ **critical infrastructures can be operated, adapted, and controlled independently**
  - ✓ **IT security and data security are improved through transparency and adaptability**

# Administration as Innovation Driver

## Creating an environment that fosters:

- Open Innovation in a whole **ecosystem**, that brings together different stakeholder to support regional digital open source economy
- Open Source and Open Standards in our **state-IT**

# Digitally Sovereign IT Workplace SH

## State IT: Schleswig-Holstein is transitioning to Open Source

### Linux (LX)

Conceptualization of an open-source based operating system.

Deployment of Linux for workplaces to replace Microsoft Windows.

### Video Conference

Customization and rollout of the Jisti Meet and Open Talk for Video-Conferencing.

### LibreOffice (LO)

Customization and rollout of the LibreOffice open-source office suite.

Replacement of Microsoft Office with LibreOffice

### Collaboration and Groupware

Utilization of open-source products such as Nextcloud, Open-Xchange, and Thunderbird.

Integration with Univention UCS AD-Connector to replace Microsoft SharePoint and Exchange/Outlook.

### New Directory Service

Development of an open-source based directory service.

Replacement of Microsoft Active Directory.

### Specialized procedures

Assessment of specialized procedures for compatibility and interoperability with LibreOffice and Linux.

### New Telephony

Development of an open-source based telephony solution (OSKAR).

Replacement of Telekom-Flexport.

# Implementation Challenges

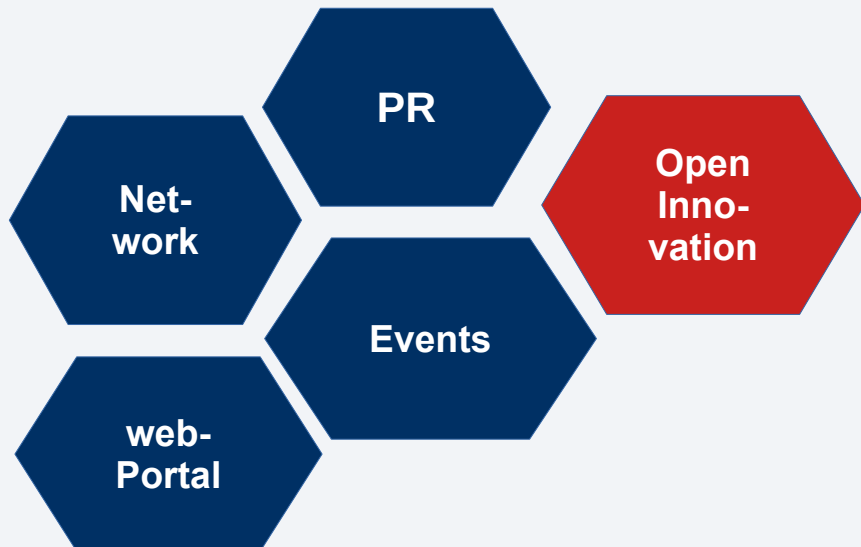

1. **Use of specific IT-application** in which Microsoft software is deeply embedded
2. **Document sharing** with other states and federal level
3. **Change Management**

# Budget and Procurement

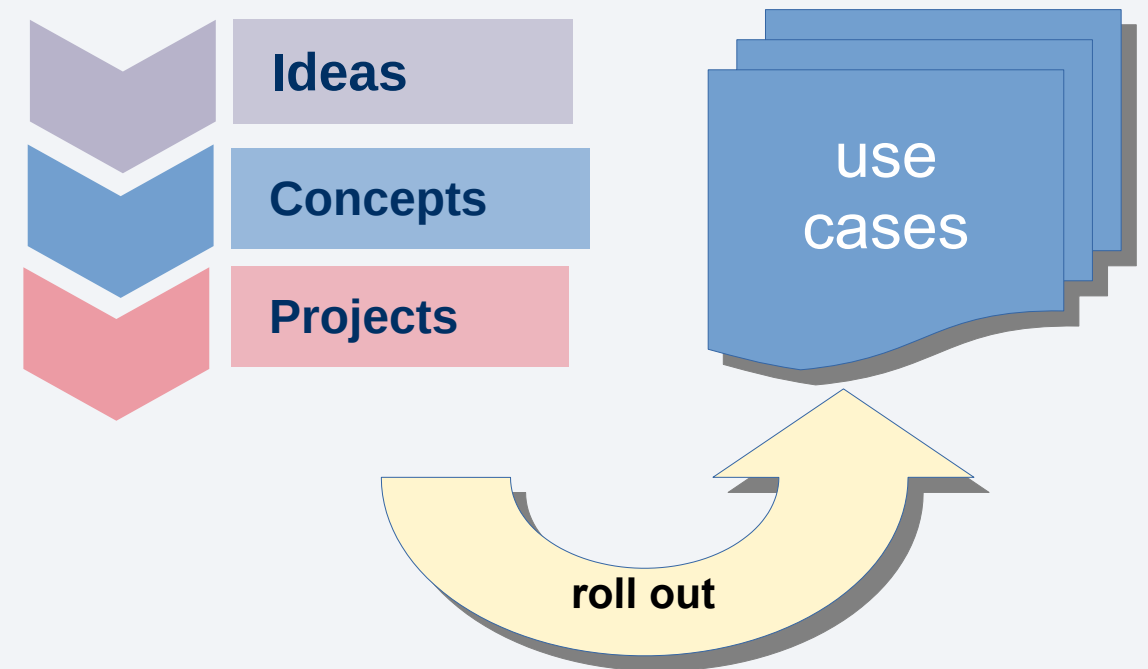

1. **Budget**: share of Open Source in public IT procurement spending must be gradually increased at all governmental levels - federal, state, and municipal
2. **Procurement**: laws must be adjusted to create targeted opportunities for prioritizing Open Source solutions

# Open Innovation in Schleswig-Holstein

## DigitalHub.SH

## State Programm „Open Innovation“

# Open Innovation: Electronic Case File

## What problem is being solved?

- High time loss due to paper-based and inefficient administrative processes.
- Lack of storage options makes it difficult to comply with retention obligations.

## What does the new solution offer?

- Further development of an existing proprietary solution into an open-source-solution
- Simplification of collaboration and cooperation within the association

## Involved project partners:

# Open Source Program Office

An Open Source Program Office (OSPO) is an **intra-organizational** or **intra-administrative** central coordinating office. It steers the **strategical usage**, the **development** and the administration of open-source software.

The **OSPO Schleswig-Holstein** takes this part from the federal state administration and stands for:

- community management & networking between administration, economy & society (DigitalHub)
- transparency & open governance
- digital sovereignty through open-source
- strategy (& steering) of open-source-usage

**It is the central point of contact for all open source activities** and ensures a sustainable, independent and innovation-promoting IT landscape for Schleswig-Holstein in the long term.

## Economically impact

- **Study by EU Commission (2021):** 10 percent increasing contributions to OSS software would generate an additional economic growth in der EU between 0.4 percent and 0.6 percent, as well as more than 600 additional ICT start-ups in the EU.
- **Harvard-Study (2024)** „... find that firms would need to spend 3.5 times more on software than they currently do if OSS did not exist.“

# Contribution to the UN's Goals:

The promotion of **open source** paradigms and the cultivation of **digital sovereignty** within the context of Schleswig-Holstein's governance framework resonate with a spectrum of **United Nations Sustainable Development Goals (SDGs)**

## Goal 17:

Advocating for open-source practices and digital sovereignty in Schleswig-Holstein supports **collaboration** and **knowledge sharing** among governments, businesses, and civil society. This cooperative effort strengthens **global partnerships** and broadens access to technologies, which is crucial for **sustainable development**.

# To Do-List

1. **Binding Open Source Strategy:** clear roadmap and milestones
2. **Procurement laws-reform:** allow public administrations to prioritize Open Source
3. **Budget shifting/ redesign:** shifting money from licenses to development, training, and community building
4. **Political leadership:** courage to act
5. **Understanding:** sovereignty requires systemic changes and not just technical replacements
